Contract awarded to Research Associates of Marcy

by Fran Crumb, Information Directorate

ROME, N.Y. — The Air Force Research Laboratory has awarded a \$223,000 contract to Research Associates for Defense Conversion of Marcy.

The two-year agreement, “Enhanced Moving Target Simulator,” will result in the design and modification to existing equipment in tactical shelters used for research and development of radar technology.

“Several areas have been identified for enhancement to make

these shelters more flexible and easier to use,” said Michael O. Little, program manager in AFRL’s Sensors Directorate at Rome. “The enhancements will allow us to test radars that the original equipment was not capable of testing.”

The contract also calls for Research Associates for Defense Conversion to perform a study on concepts involving a future airborne radar utilizing unmanned aerial vehicles. @
